Personal Profile

I build and scale internal AI systems and Agents, working at the connection point between strategy, architecture and hands-on delivery. My background is a blend of commercial and technical enterprise sales with the last 18 months scaling internal AI operations across a 300 person GTM org.

I map workflows from IC to VP, align tooling to departmental strategy and build solutions from scratch which serve everybody in the chain. At HiBob, who has been *AI first* for 24 months, I have built, consolidated and enabled the org to 80%+ adoption, building and shipping 20+ tools and driving upwards of 20k hours productivity. I own the full lifecycle including scoping, prompt architecture, PRD's, integration design, agent workflows and enablement. I work closely between the business and engineering teams to ship production grade solutions.

Outside of work, I'm usually renovating and redesigning my 150-year-old home, training for my next marathon, baking pastries, playing piano (poorly), or wandering through the woods with my Golden Retriever, Barney. I also continue to keep my technical skills sharp and work hands-on with LLM APIs, multi-agent architectures, prompt engineering and front-end tooling (Next.js, Supabase), using AI as a co-pilot to move faster.

Tools & Platforms

AI & Agents: Claude, GPT-4o, Gemini, Anthropic API, OpenAI API, NotebookLM, MCP integrations (HiBob, Granola)

Prompt & Workflow Architecture: Prompt engineering, multi-agent design, LLM chaining, system prompt architecture

Automation & Integration: n8n, Make, Zapier, Workato

Development & Infra: Next.js, Supabase, Clerk, JavaScript, JSON, REST APIs (*via Personal Projects*)

CRM & GTM: Salesforce (Flow, custom objects, JSON), Clari, Gong, Outreach, HubSpot

Productivity & Ops: Notion, Asana

Personal Projects

[Rep Stack](#) - AI agent platform for B2B sales reps (Next.js, Supabase, Anthropic API). *Currently in active development.*

[alexfarman.me](#) - Personal portfolio site and digital CV featuring a live Anthropic API integration and interactive AI agent for hiring managers.

Career History

HiBob - Feb 2024 - Present

GTM AI Strategy Consultant: Since July 2025

Internal AI transformation lead across a 300-person global GTM organisation

- Own a structured internal AI delivery pipeline from Ideation, POC, Test, Go/No-Go (signed off at CRO level for complex initiatives), Build, Release, Enablement and Iteration. Intake is driven by executive strategy sessions, departmental discovery, IC & Manager interviews, workflow shadowing and inbound requests. Prioritise initiatives by business value, time saved, impact on company KPIs, and build complexity.
- Defined and implemented the global AI operating model for Sales (New Business & Customer Growth), creating structured pathways for both bottom-up innovation and executive-led initiatives across a 300-person org reaching 80%+ adoption across sub-departments.
- Drove 150% increase in certified tool adoption within 60 days through structured enablement and value-led workshops shifting the narrative from "use AI" to "AI is a valued part of your workflow."
- Consolidated fragmented AI experimentation (including 55+ BDR-built tools) into a single, globally-adopted outbound system covering Email, LinkedIn messaging, sequencing and localised positioning aligned to manager expectations and product marketing strategy.
- Built and deployed a multi-agent Sales Leader Insights system integrated directly into Salesforce. This agent surfaces deal intelligence from late-stage calls, a second populates a dedicated Salesforce field visible to

managers, VPs and CRO and a third generates a two-sentence forecast summary highlighting key deal risks. This replaces reliance on AE sentiment with structured, AI-generated insight.

- Built a programmatic Gong to Knowledge Base pipeline using the Anthropic API to extract and structure feature and value data from recorded calls at scale, converting unstructured conversation into queryable content. This KB now powers RFP responses, prospect question answering and acts as a live feature knowledge base for agents across the org.
- Built and maintained a centralised AI knowledge hub (hosted on Google Sites within HiBob infrastructure) hosting prompt libraries, use-case playbooks, onboarding guides and tool documentation. This enables teams to self-serve without central dependency and is complemented by a lightweight AI routing tool that guides users to the right solution for their specific challenge.
- Built and led a 12-person AI Leaders CoE. This is a group of high-performing ICs and managers trained and upskilled to run peer-led enablement sessions, deliver new tools and act as trusted advisors for AI adoption within their teams. Shifted the internal messaging from experimentation to "useful, high-value AI" and gave people a clear framework for which tool to use, when, how & why. The CoE has delivered 5 solutions in its first 3-6 months.
- Designed "AI in the flow of work" integrations embedding solutions into Salesforce (based on Stage) and Slack (company KB access)
- Define success criteria and hypotheses before every build. Each tool's intent has tailored metrics, ranging from adoption and usage rates to time saved and workflow velocity. I track post-launch impact through usage data and structured feedback loops, while maintaining a distinction between AI as a contributing factor to business outcomes (win rates, forecast accuracy, conversion velocity) versus a direct determinant.
- Act as the connective layer between GTM leadership, RevOps, Enablement and the internal development team ensuring AI strategy lands consistently from IC to Exec. In a sentence, I turn AI experimentation into measurable GTM impact.

AI Solutions (3/20)

Deal Prep: GPT-powered Deal Intelligence Layer (80% global adoption)

Designed and embedded an AI system to eliminate information loss across BDR to AE to SE transitions and formal deal reviews. Improved MEDDPIC consistency and deal quality, enabled structured evaluation for AEs, SEs and Sales Leadership and drove measurable improvements in deal hygiene and forecast confidence.

SMB Demo Acceleration: Exec-level initiative

Led evaluation and alignment for AI-driven demo automation in SMB motion. Projected to reduce MQL to SQL conversion time from 18 days to 3 days, eliminate 500+ hours annually spent on unqualified opportunities and improve sales capacity allocation toward higher-value deals.

BDR Outbound Automation

Designing and deploying a homegrown account prioritisation engine built on weighted intent signals (web visits, hiring signals, funding rounds, product usage triggers and others). A 3 stage autonomous Agent drives pipeline: Intent signals > automated account research > BDR Outbound Co-Pilot (messaging) is designed to eliminate manual research and prioritisation entirely. Objective to redirect BDR capacity toward relationship building, calls and meeting bookings.

HiBob

AI Leader for Sales: June 2024 - July 2025 (part-time)

Senior Sales Engineer: Feb 2024 - July 2025

- Initiated and championed the use of AI by developing the first, custom GPTs for the global SE team of 37 SE's.
- Included automating both critical and everyday tasks including RFP responses, discovery preparation, demo preparation, business case creation and demo feedback automation resulting in:
 - Demo Prep GPT - Saved c4,440 hours per year across the the global SE team (67% reduction)
 - RFP Responses - Reduced RFP completion time by 224 hours annually (70% reduction)
- Wrote "how-to" guides and other documentation to drive the adoption of custom GPTs and AI tools
- Led local enablement sessions and organised mini project teams to create and execute new ideas for AI use cases
- Winner of the Global AI Innovation Award

- Attached to and responsible for \$749k ARR equalling \$2.24m TCV throughout H2 (Jan EoY, 3 month ramp)
- Secured the 3rd largest 2024 UK deal at \$334k ACV, including the largest UK Payroll module, and 2nd largest global LMS deal. Both Payroll and LMS were new modules released GA from April 2024.
- Developed the “Win-Plan Template” which aligned with the emerging global sales playbook, including MEDPICC analysis and improved collaboration and alignment within deal teams
- Redesigned and improved the RFP template, shifting the SE team from reactive to more proactive, and overall improving our RFP win-rate.

Senior Solutions Consultant, Bullhorn for Salesforce

Bullhorn - Sept 2020 - Feb 2024

- International Solutions Consultant of the Year 22/23 in a team of 15 SC's
- Achieved Presidents Club for highest quota attach in the Intl & EMEA team
- Closed the 2nd largest deal in FY22/23 at \$2.6m ACV.
- Closed total of \$3.5mil ACV in FY22/23 managing deals ranging in size from \$200k-\$1mil+
- SME for the Workforce Management solution, influencing sales strategy and GTM efforts
- Designed and led a comprehensive “Workforce Management” training programme to 15 SC's
- Led the technical portion of the sales process including solution discovery, RFX, tailored and compelling demos and workshops, always with the customers requirements front of mind
- Continual maintenance and configuration of Salesforce demo environments including custom objects, flows, mobile configuration with JSON and digital experiences for client/candidate portals

IT Sales Solutions Specialist, Cooper Parry IT - October 2019 - July 2020 (Covid-19 Redundancy)

Principal Consultant (IT and Technology), Hays - June 2016 - October 2019

Education

Nottingham Trent University - (BSc) Psychology, Grade: 2.1 (September 2013 - June 2016)
